Reality App Development

vnsh Kumar

Senior Game Developer

Gurugram, Haryana, India

Summary

I'm a passionate Unity Game Developer with 2+ years of hands-
on experience building hyper-casual, hybrid-casual, AR, VR,
and multiplayer games. I specialize in crafting immersive digital
experiences using Unity, C#, Photon PUN, and other emerging tech.
My journey spans across dynamic startups like Saathi (formerly
GreyBlue Ventures), Meta Extended Reality (MXR), and Zaap
Solutions—where I not only delivered full-fledged game systems
but also built reusable code libraries and explored the edge of
multiplayer innovations.

My strengths lie in rapid prototyping, creative problem-solving,
and adapting to new technologies to deliver user-centric design.
Whether it's enhancing realism in AR/VR environments or optimizing
game mechanics for fun and retention, I thrive in projects that blend
creativity with technology.

Let's connect if you're looking to collaborate on interactive
experiences, immersive simulations, or anything that pushes the
boundaries of digital play.

Experience

Nexchar Ventures
Senior Software Engineer
June 2025 - Present (3 months)
Gurugram, Haryana, India

Saathi
Game Developer
October 2023 - May 2025 (1 year 8 months)
